

Bridge financing ahead of the seed round

Arvut GmbH · Zug, Switzerland · July 2026

WHAT ARVUT IS

Arvut is an AI-native platform for Swiss fiduciaries, in production on live client mandates today. A traditional fiduciary is the shared accountant of SMEs. A fiduciary in the Arvut network is also their fractional CFO — and not only for small businesses. The platform is what makes that role economically possible, without hiring analysts.

WHY IT IS DEFENSIBLE

Behind the platform sits a proprietary accounting protocol — **DAP, the Digital Accounting Protocol** — in production since June 2026 and deliberately kept behind NDA. Where every system on the market shows a photograph of yesterday (fixed prices, assets at cost, declarations booked as revenue), DAP shows the business as it is **today** — solvency, true margin, real asset values — as a second, live view on top of fully compliant Swiss books, executed by AI agents from the first line of code. It is not a feature that can be copied in a quarter; it is a different way of producing accounting data, with a patent programme under evaluation.

SCALE OF WHAT STANDS

~114'000 lines of production code — a build the industry prices at **150–200 engineer-months** (a team of 5–8 for ~3 years) — delivered AI-native by essentially two people, on the second generation of the product (the first, 25'000 hours built conventionally, proved the domain). The founder has financed the company to production entirely personally — his house, two apartments and his pension savings are in the product. All-in, without external capital.

THE RAISE

A seed round of **CHF 500'000** is open (investor deck v19 and financial plan available on request; revenue plan to CHF ~10.5M by 2030, EBITDA-positive from year two, targeting 0.5% of the Swiss fiduciary market).

THIS NOTE: THE BRIDGE

Volume	CHF 100'000 total, tickets from CHF 25'000
Instrument	Convertible loan (Wandeldarlehen), Swiss law, subordinated (qualifizierter Rangrücktritt)
Conversion	Automatic into the seed round at a 20% discount to the round terms (qualified financing ≥ CHF 500'000); survives a GmbH→AG conversion unchanged
Maturity	18 months; interest 10% p.a., capitalised and converting together with the principal
Use of funds	Full build velocity through the raise: AI infrastructure and tooling, hardware, founder runway

The bridge buys one thing: **uninterrupted speed**. The same pipeline that took DAP from specification to production in a single quarter keeps running at full pace while the seed conversation completes — and bridge participants enter earlier, smaller and at a discount to everyone who follows.

NEXT STEP

NDA → the full protocol deep-dive and a live demonstration on a complete demo fiduciary, with the founder in the room — arranged through Heinz Brägger or Federico Cesconi.
